

Diagram 1 — UAV Onboard Wiring / Integration

Physical build: peripherals hang off a shared data bus; two compute hubs (FC + Jetson) drive it; a power bus feeds everything.

Diagram 2 — Three-Tier Deployment Architecture

Where each research model runs, and how models & data move between the UAV, the field gateway, and the cloud.

Diagram 3 — Dual Inference Pipeline (Harvest + Security)

One airframe, two co-running workloads: crop harvest-readiness sensing and network-layer robustness.

Diagram 4 — Field Test-Run / Demonstration

Industrial test sortie: survey the field, decide harvest readiness, and validate robustness under measured interference.
